

## SD Blackout AHB-1 "DINO" Mod

This mod will bring you damn near the direction of the RETRIBUTION Pickup.

All you need is a .047u (47nF) capacitor. Solder this cap between the output of your AHB-1 and the input of your 25K volume pot. And now play FAST :-)

### **BUT HOW?**

This simple and really cheap mod forms a high pass filter which removes the massive low end and also lowers the enormous output a bit :-)

If you need your fat low mids but want to tighten things up a little bit, use a .1u (100nF) cap instead. This will remove bass, but leaves the nice low mid growl.

If you only want to remove the floppy sub bass frequencies of the AHB-1, use a .22u (220nF) capacitor.
